

Module Name:	Facebook - Phone Number Validation (EP)
Test Case ID:	TC_BVA_001
Tester Name:	Ashish
Test Case Description:	Verify phone number validation using Boundary Value Analysis for 10-digit phone number
Prerequisites:	WhatsApp is accessible and the phone number field is available.
Environment Information:	Android phone, WhatsApp, Internet connection

Scenario ID	Scenario
BVA01	Verify phone number just below minimum length
BVA02	Verify minimum valid phone number length
BVA03	Verify phone number just above minimum length
BVA04	Verify phone number with leading zero
BVA05	Verify phone number with spaces
BVA06	Verify phone number just above minimum length

Module Name:	WhatsApp - Phone Number Validation (BVA)
Test Case ID:	TC_EP_001
Tester Name:	Ashish
Test Case Description:	Verify Facebook phone number validation using Equivalence Partitioning for invalid inputs
Prerequisites:	Facebook is accessible and the phone number field is available.
Environment Information:	Android phone, Facebook app, Internet connection

Scenario ID	Scenario
EP01	Verify below 10-digit equivalence class
EP02	Verify 10-digit valid equivalence class
EP03	Verify above 10-digit equivalence class
EP04	Verify phone number containing letters
EP05	Verify phone number with special characters
EP06	Verify blank phone number

e numbers.

Test Steps	Test Input
1. Open WhatsApp 2. Enter a 9-digit phone number	Phone number = 9 digits
1. Open WhatsApp 2. Enter a 10-digit phone number	Phone number = 10 digits
1. Open WhatsApp 2. Enter an 11-digit phone number	Phone number = 11 digits
1. Open WhatsApp 2. Enter a 10-digit phone number	Phone number = 0123456789
1. Open WhatsApp 2. Enter a 10-digit phone number	Phone number = 12345 6789
1. Open WhatsApp 2. Enter an 12-digit phone number	Phone number = 12 digits

valid and valid phone-number inputs.

Test Steps	Test Input
1. Open Facebook 2. Enter a 9-digit phone number	Phone number = 9 digits
1. Open Facebook 2. Enter a 10-digit phone number	Phone number = 10 digits
1. Open Facebook 2. Enter an 11-digit phone number	Phone number = 11 digits
1. Open Facebook 2. Enter letters in the phone number	Phone number = 12345ABCD
1. Open Facebook 2. Enter special characters in the phone number	Phone number = 12345@678
1. Open Facebook 2. Leave the phone number field	Phone number = Blank

Expected Results	Actual Results	Status
Phone number is rejected as Invalid.	9-digit phone number rejected as Invalid.	Pass
Phone number is accepted for verification.	10-digit phone number accepted for verification.	Pass
Phone number is rejected as Invalid.	11-digit phone number rejected as Invalid.	Pass
Phone number format is handled according to validation rule	Leading-zero number handled according to validation rule	Pass
Phone number is accepted or rejected according to input-for	Input with spaces handled according to validation rules.	Pass
Phone number is rejected as Invalid.	Alphabetic phone number rejected as Invalid.	Pass

Expected Results	Actual Results	Status
Phone number is rejected as Invalid.	9-digit phone number rejected as Invalid.	Pass
Phone number is accepted for verification.	10-digit phone number accepted for verification.	Pass
Phone number is rejected as Invalid.	11-digit phone number rejected as Invalid.	Pass
Phone number is rejected as Invalid.	Alphabetic input rejected as Invalid.	Pass
Phone number is rejected or handled according to format ru	Special-character input handled according to validation r	Pass
Phone number is rejected and validation message is shown.	Blank phone number rejected with validation message.	Pass

Comments

Minimum boundary - 1 digit verified

Minimum valid boundary verified

Minimum boundary + 1 digit verified

Format validation checked

Input format verified

Non-numeric input verified

Comments

Represents phone numbers shorter than 10 digits

Represents valid 10-digit phone numbers

Represents phone numbers longer than 10 digits

Represents non-numeric input

Represents invalid-format input

Represents empty input class
